

How to run the code?

- There are 2 different python notebook files for Dataset-1 and Dataset-2 analysis
- No special installing of packages is required. All the packages have been imported already.
- Since it is a notebook file, all the results for the code are already displayed.
- In case, if you want to re-run the code, kindly run all the cell at once.
- Make sure to store both the datasets files in the same directory as that of the python notebook files.
